- **GT (Grand Trunk) Road.** The GT Road, often called as "Gernali Sadak" (Generals' Road) and Sadak-e-Azam ('The Grand Road') was built by Sher Shah Suri, in the 16th century AD. The road originates from Kabul, Afghanistan enters Pakistan near Peshawar through the famous Khyber Pass, skirts the suburbs of Taxila, and goes down to Lahore and crosses into India at Wahgha, finally culminating its 2600 kilometers long journey at Kolkata. Initially the road was just a dirt track, which was paved by the Mughal emperors in the sixteenth century. The road, known to 17th century European travelers as 'the Long Walk', has a rich history and is still by far the busiest, wildest road in areas that are now part of Afghanistan, Pakistan and India. During the British rulers of colonial India, the road was renamed as the Grand Trunk Road.

Main Angels and their Duties

Only Allah knows the number of angels. There is no clear information about the number of angels in the Qur“an and hadiths. Some of the famous angels and their duties as follows.

Gabriel (A.S)

Gabriel (A.S) is one of the four greatest angels. He is appointed to convey revelations to the prophets by Allah. In three places of the Qur“an, His name is Jibril. Besides, He is mentioned in verses as the spirit, rasulun karim, ruh al- Amin and ruh al-qudus“. In addition to these, in one of the hadiths, he is called “an-namus“.

H. Israfel (A.S)

The angel that will blow the trumpet is called Israfel. His name is mentioned among the four great angels in the hadiths. Israfel will blow two times, in the first one, the Doomsday will occur and in the second blowing, the resurrection will occur. Because of this duty of him, He is called the angel of Soor (the Trumpet).

H. Azrael (A.S)

His duty is to grasp the souls of people whose death times have come. He is called as “Malak-ul Mawt“, that is, the angel of death.

Hz. Mikail (A.S) (Michael)

He is one of the greatest angels of four and He is responsible for the pouring of rain, the blowing of the wind, natural events such as the ordering of seasons and the management of supplications of the created beings. He is only mentioned in one place of the Qur'an. Hz. Mikail is the angel that manages the divine work of arts that are planted on the field of earth with the power of Allah and His order.

Kiraman Katibin

It is the names of the angels who are attendant on the right and left of humans. The angel on the right is responsible for recording the good deeds and manners; the angel on the left is responsible for recording the bad deeds and manners. "The angels who are also called Hafaza will attend as witnesses of the deeds of humans in the Day of Judgment during reckoning.

Munkar - Nakir Angels

They are the angels that question man after he dies in the grave. The words of "Munkar" and "Nakir" means unknown, unrecognized and unaccustomed.

They are called by this way because they come to the dead in a way that he/she has not seen before. These two angels question the dead by questions as follows and treat them according to the answers that they receive:

Who is your lord? Who is your prophet? What is your book?

Wajib & Fard

Wajib Prayers: Wajib prayers are necessary and willful neglect is considered sinful. However, if someone misses any of these due to unavoidable circumstances, Qadha (make-up of missed prayer) is not required. The following are Wajib Prayers:

- Three Rak'at of Vitr after 'Isha
- Two Rak'at of Eidul-Fitr and Two Rak'at of Eidul-Adha

- Two Rak'at are offered while performing the Tawaaf of K'aba

Fard al-Kifaya: They are fards that are not obligatory for each Muslim; when some Muslims fulfill them, the other Muslims become exempt from them. If nobody fulfills them, the whole community becomes responsible and sinful for them. If some Muslims perform the Janazah Prayer when a Muslim dies, the other Muslims become exempt from it.

Tayammum: Imagine you are in a situation in which you need water to perform Wudu but if you can't find any. Or you are calling in sick and you can't touch water with your bare hands. You can perform Tayammum, an alternative to wudu, which does not require the use of water. Procedure of Tayammum is as follow:-

- Firstly, the intention (niyyah) of Tayammum to attain purity (taharah) must be made.
- Spot a clean place. This can be anything natural like rock, sand or grass. Place hands on the ground. Lift hands and ensure that there is no dust on the palm surface by rubbing hands together. Rub face with hands
- Again, place hands on the ground. Lift hands and ensure that there is no dust on the palm surface by rubbing hands together. Rub your arms.

Fards in Ghusl: There are three fards of ghusl:

- To rinse the mouth with water
- To sniff water into the nose and blow it out,
- To wash the whole body.
- It is fard to wash the mouth, the nose and the whole body at least once. A person who washes them three times is regarded to have fulfilled the fard and gains the reward of fulfilling the sunnah.

Fards in Wudu: There are four fards of wudu:

- Washing the face from hair of the forehead to the lower portion of the chin; and across from one ear to the other.

- Washing both hands and arms upto the elbows
- Performing the Masa'h (wiping with wet hands, one fourth of one's head)
- Washing both the feet upto the ankles

Science Notes

1. **Vernier Caliper.** It is an important instrument used to measure the internal / external diameter and length of a substance upto 0.1 mm.
2. **Scalar Quantities.** Physical quantities which are completely specifies by their magnitude expressed in suitable units e.g. Mass, Value, Length, Speed, Time, Work, Density etc.
3. **Vector Quantities.** Quantities which require magnitude as well as direction for their complete description e.g. Force, Acceleration, Displacement, Velocity, Torque etc.
4. **Speed.** It is defined as distance travelled in unit time. It is a scalar quantity. So the unit of speed will be $\text{Speed} = \text{distance} / \text{time} = \text{meter} / \text{second}$.
5. **Velocity.** It is the rate of change of displacement along a particular direction. It is a vector quantity.
6. **Acceleration:** It is defined as the rate of change of velocity so the unit of acceleration will $\text{Acceleration} = \text{Velocity} / \text{time}$
7. **Newton's Law of Motions**
 - a. 1stLaw of Motion. In the absence of an external force, a body at rest will remain at rest and a body in motion will it continue to motion in a straight line.
 - b. 2ndLaw of Motion. When a force is applied on a body it produces acceleration in it which is directly proportional to the applied force and inversely proportional to the mass of the body.
 - c. 3rdLaw of Motion. To every action there is equal and opposite reaction.
8. **Law of Gravitation**

Everybody in his universe attracts every other with a force which is directly propositional to the product of their masses and inversely propositional to the square of the distance between their centers.
9. **Mass and Weight**
 - a. Mass in scalar while weight in a vector quantity.
 - b. Mass remains constant everywhere while weight changes i.e.

height depth.

c. The unit of mass is kilogram while unit of weight is Newton.

10. Kinetic Energy. The energy due to the motion of a body is called kinetic energy. $K.E = \frac{1}{2}mv^2$.

11. Potential Energy. The energy due to the position of a body is called potential energy.

12. Momentum. It is the product of mass and velocity. ($M = m.v$)

13. Power. It is the rate of doing work.

14. Energy. It is defined as the capacity of doing work. There are two types of energy kinetic and potential.

15. Centripetal Force. When a body moves in circle with a uniform motion, it is subject to a force direct towards the center this is called centripetal force.

16. Centrifugal Force. It is a force while acts on a rotating body under the influence of which the body tends to move outward along the radius.

17. Machine. It is a device which enables us to multiply force or gain in speed or change the direction of the force.

18. Friction. If the two bodies be in contact with one another the property by virtue of which a force is exerted between them at their point of contact to prevent one body slipping over the other is called friction and the force between is called force of friction.

19. Pascal's Law. The pressure exerted by a liquid is transmitted equally in all direction.

20. Hook's Law. "Within elastic limits, stress is "directly proportional to the strain"

21. Barometer. A device to measure the atmospheric pressure is called "barometer"

22. Archimedes Principal. "When an object is immersed in a liquid it experiences an upward thrust and loses its weight, which is equal to the weight of the liquid displaced by it".

23. Pressure and Thrust. When two bodies are in contact, the force which acts between them is called thrust, while pressure at any point is thrust per unit area. Thrust= pressure*Area

24. Radioactivity. The phenomenon of emission of radiation from an element is called “radioactivity”.

25. Galvanometer. It is very sensitive instrument with which we can detect electric current.

26. Semi Conductor. Those substances whose conductivity lies b/w conductors and insulators.

27. Electric Motor. A device which converts electrical energy into mechanical energy is called “Electric motor”.

28. Boyle’s Law. If the temperature of gas remains constant, its pressure varies inversely as the volume.

29. Charles’s Law. Volume of a given mass of any gas is directly proportional to the temperature at constant pressure.

30. Current. “The flow of charge through a certain cross section area is called current”.

31. Newton’s Law of Cooling. The law states that the rate at which a body loses heat is proportional to the differences of temperature between the body and its surrounding independent of the nature of the body.

32. Heat. It is an agent which produces the sensation of warmth. Its effect are: rise in temperature, increase in volume, change of state chemical and physical action.

33. Reflection. When a ray of light travelling in one medium meets the boundary of a second medium, a part of it is sent back to the first medium this is called reflection.

34. Laws of Reflection

- a. The angle of reflection is equal the angle of incidence.
- b. The incident rays, the reflected ray and the normal to the surface at the point of incident, all lie in the same plane.

- 35. Refraction of Light.** When a ray of light is incident obliquely on a surface of separation between two media, a part of it goes in to a second medium along with a part different from the direction of the incident ray.
- 36. Rainbow.** Sometimes an arc of beautiful colors appears in the sky after a rain shower, this is called rainbow. It is produced by the dispersion of light. After the rain, innumerable droplets of water remain suspended high up in the air, when sunlight falls on these droplets; it gets split as each is like a prism. Each ray of light entering the droplet suffers refraction and total internal reflection, and a rainbow is formed on the sky. It is formed on the side opposite to where the sun is located.
- 37. Focal Length.** The distance between focus point (principal focus) and the pole of the mirror.
- 38. Speed of Sound.** 331 m/s
- 39. Transverse Waves.** The waves in which the particles of the medium or the disturbance travel is perpendicular to direction in which wave travel.
- 40. Longitudinal Wave.** The wave in which disturbance is parallel to the line of travel of the wave.
- 41. Torque.** The turning effect of force upon an object. $T=fd$
- 42. Capacitor.** A device to store charge.
- 43. Weather.** The condition of any region for one or two days is called weather.
- 44. Sound.** Stimulus capable of producing the sensation of hearing is called sound.
- 45. Coulomb's Law.** The force of attraction or repulsion between the two points of charges is directly proportional to the product of the two charges and inversely proportional to the square of distance between them.

Measuring Tools

- Pressure: Barometer
- Voltage: Voltmeter
- Purity of Milk: Lactometer
- Temperature: Thermometer
- Velocity of Wind: Anemometer
- Earthquake: Richter Scale
- Degree of Humidity: Hygrometer
- Blood Pressure: Sphygmomanometer
- Radioactivity: Geiger Counter
- High Temperature: Pyrometer
- Rainfall: Rain Gauge
- Earthquake Recording: Seismograph
- Electric current: Ammeter
- Altitude: Altimeter
- Velocity and Direction of Wind: Anemometer
- Sensitivity of Skin: Algesimeter
- Atmospheric Pressure: Barometer
- Improvement of Hearing Power Audiometer
- Quantity of Heat: Calorimeter
- Intensities of Colors: Colorimeter
- Longitude of Vessel Over Sea: Chronometer
